

Introducing ARWA's Newly Registered **APPRENTICESHIP PROGRAM!**

During the 40th Annual Technical Training Conference, the Alabama Rural Water Association and the Department of Labor held a signing ceremony, formally adopting the Standards of Apprenticeship for the job of **Wastewater System Operator** with the Alabama Rural Water Association.

The ARWA is immediately taking applications to sponsor apprentices in the State of Alabama who wish to become Wastewater Operators. We also strongly encourage any Wastewater System in Alabama who would like to participate with us in this program to contact our office and learn how. These systems will need to enter into an agreement with the ARWA in order to have apprentices placed with the group and take advantage of the many opportunities afforded to employers in an Apprenticeship Program.

This is only the first step! We will be working hard to adopt standards for a water position as well so we can serve all the water and wastewater systems in the State. Please reach out today and join us in building this opportunity for Alabama Wastewater Systems and individuals looking for employment in our industry!
